

Assignment Questions for Big data Analytics

MODULE 1

(UNIT 1)

1. Define big data. Why is big data required? How does traditional BI environment differ from big data environment?
2. What are the challenges with big data?

(UNIT 2)

1. What is clustering? Explain in detail. Also explain any two of its applications.
2. Describe the steps to find k clusters using k-means algorithm.

(UNIT 3)

1. What is data science pipeline? Explain in detail with a neat diagram.
2. How to refactor the data science pipeline into an iterative model? Explain all its phases with a neat diagram.

(UNIT 4)

1. Explain with example Projection in context of Pig.
2. Explain with example Storing and outputting data in context of Pig.
